

Few Points to be remember when we are making “model” & “Controller”

1.For creating Model

Model बनाते वक़्त हमेशा singular word use करना और First word Capital होना चाहिए

For eg:

```
php artisan make:model Teacher -m
```

2. Edit the migration (i.e database table name)

For eg:

```
$table->string('name');
```

```
$table->string('contact');
```

3. model बनाने के बाद हमेशा इस Code को Run करना

```
php artisan migrate
```

4. For creating controller

controller बनाते वक़्त हमेशा first letter capital रखना होगा

For eg:

```
php artisan make:controller TeacherController -r
```

5.Controller बनाने के बाद हम resource use करके Route बना सकते हैं

For eg:

```
Route::resource('Teachers', TeacherController::class);
```

```
Route::resource('Donkey', TeacherController::class);
```

6.अगर page expired का message आएगा तो आपके code में method के just ऊपर type करिए

@csrf

It checks your security level.

Now we are going to learn some basic of HTML

1. Inline elements

-inline elements always positioned as horizontally.

Eg: <a> tag

We can position inline element into block-element just by adding inline element into block-element.

Eg:

<div>

 <a>

</div>

Now this <a> tag is positioned as block-element

2. Block elements

-Block elements always positioned as vertically.

For eg: <p> tag , <div> tag

Div is nothing but a empty container
